6.1.1 Detailed Description

This is the remote façade pattern class. This class will be in contact with the client side of the application. Managing all of the GET and POST requests, and making use of the ApplicationService pattern.

{@Path} in the class definition is used to define the HTTP path, as well as all of the {@Path} seen bellow in the corresponding methods.

Method that creates a DBManager instance if needed and returns it.

Returns

DBManager instance

Definition at line 40 of file DBManager.java.

6.10.2.5 getReservationsByUser()

```
List<Reservation> es.deusto.bspq21e1.server.dao.DBManager.getReservationsByUser (
            String vanRenter )
```

Method that finds and returns all of the reservations given a user.

Parameters

vanRenter	to retrieve the reservations from

Returns

an ArrayList with all of the user's reservations

Definition at line 330 of file DBManager.java.
